Excerpt: . . . In conclusion, it may be remarked, that in the cases represented in figs. 1, 2, and 3, it is not necessary to illuminate so large an area as in that represented in fig. 4, because the area seen by the observer is smaller in the former ones. Part III. --MODES OF VIEWING OBJECTS WITHIN THE EYE. Having now considered the mode of illuminating the fundus oculi, we come to treat of the various conditions under which we may obtain a distinct view of objects situated upon it, by means of light reflected from their surfaces. If we hold a biconvex lens between the eye and the page of a book, and at a distance from the book less than its own principal focal distance, we see an erect magnified virtual image of the print. If we remove the lens further from the book, the...
